

## Aileron Differential Setup by Andy Kunz

Problem: Can't find where to enter aileron differential?

Make sure you select a wing type that has 2 aileron servos. Only then will differential be visible.

That bit of valuable information needs to be added to DX9 video! I stopped short of adding the dual servo wing thinking I had an issue with the software and wanted it right so never loaded it to see it there.

Wing type is one of the first things you should define when creating a new model. The menu system is intended to lead you from one item to the next to build the configuration.

Andy

If you follow the downward path on the setup page it is the first thing! Right after naming the model. It is now , AIRCRAFT TYPE. Up to the DX8 ,it was called WING TYPE.
