

Telemetry Logging Setup by Andy Kunz

In the Telemetry menu there is a File Setup menu. That's what you need to configure to use the logging feature. NOTE: Don't use the switch "ON" at this time; the software needs to see a transition from the off state to the on state to start logging, and "ON" doesn't provide that - it's always on!

The TLM file that is created can be viewed using the software download from www.robo-software.com. This is the same tool we use internally, and I work with Martin to make sure he has the latest and greatest and to proof what he generates.
